Brainiac IP Solutions
PATENT · TRADEMARK · DESIGN · IP STRATEGY

ONE-DAY WORKSHOPS · R&D TEAMS · PATENT PROFESSIONALS

Turn R&D effort into innovation you can protect.

Two hands-on workshops from Brainiac IP Solutions. One helps engineers recognise, document and act on ideas worth protecting. The other sharpens claim drafting for experienced patent professionals.

THE PROGRESSION

Spot useful problems > Build better solutions > Identify IP risks > Protect what matters

01

ONE DAY

IP for R&D

From Product Ideas to Business Value

For R&D engineers, product developers, technical managers and innovation teams.

No prior patent knowledge needed.

02

ONE DAY

Advanced Patent Drafting

Claims, Prior Art, FTO and AI

For patent agents, in-house IP teams and patent engineers who already draft applications.

Prior drafting experience required.

Run in-house for your company, or on open dates. Led by Suneet B Sabale, registered Indian Patent Agent.

PROGRAM 01 · ONE DAY · R&D TEAMS

IP for R&D: From Product Ideas to Business Value

Your engineers solve problems every day, and many of their best improvements never get reported because they do not look like breakthroughs. This workshop helps your team recognise those ideas, record them properly and know when to involve the IP team.

WHO IT IS FOR

R&D engineers, product developers, technical managers and innovation teams. **No prior patent knowledge is required.** Participants follow one product case from problem to protection.

The day, in five steps

1. **Find problems worth solving**
   Turn customer complaints, performance gaps, cost targets and competitor products into clear problem statements.

2. **Know what can be protected**
   Tell patents, designs, copyright and trade secrets apart. Read a patent and separate what it describes from what it claims.

3. **Use prior art early**
   Learn from published and expired patents. See why a patentability search does not clear a product, and why one expired patent does not either.

4. **Document and escalate**
   Recognise inventions, understand who owns them, write a useful invention disclosure and know when to raise an FTO request.

5. **Decide and build the system**
   Choose design and patent protection, India or PCT, and set up an idea bank with a review committee and sensible incentives.

What your team takes back

- Problem statement and IP rights map
- Prior art and patent-reading worksheet
- Invention disclosure template
- FTO request template
- Two product redesign concepts
- Protection and market-selection worksheet
- Draft idea bank and 90-day plan

What your company gains

- A steadier flow of invention disclosures
- Earlier warning of launch risks
- Better inputs for filing decisions
- A repeatable way to review ideas against product and business needs

Workshop exercises are educational. They give your team a decision framework and do not replace a product-specific FTO assessment or legal opinion.

PROGRAM 02 · ONE DAY · ADVANCED

Advanced Patent Drafting: Claims, Prior Art, FTO and AI

Strong claims come from sound technical analysis. Working on one supplied product case and prior art set, participants draft, test, compare and revise their claims, with guided feedback at each step.

Extract concept › Test vs prior art › Draft claims › Review › Revise

WHO IT IS FOR

Patent agents, in-house IP teams, patent engineers and professionals who already draft applications or claims. **Prior drafting experience is required.** This is not an introduction.

What participants work on

1. **Extract the inventive concept**
   Pull the problem, essential features, embodiments and useful variants out of a product disclosure.
2. **Use prior art deliberately**
   Test distinctions and decide what to ask the inventor next.
3. **Build the claim set**
   Draft independent and dependent claims with clear technical relationships.
4. **Review for scope, support and clarity**
   Spot avoidable limitations and check every claim against the specification, drawings and embodiments.
5. **Keep drafting and FTO apart**
   Separate the protection you seek from third-party rights that affect the actual product.
6. **Apply AI with controls**
   Review AI-assisted language, verify facts and sources, and protect confidential material.

What participants take back

- A revised claim set
- A prior art comparison
- A drafting and FTO question list
- A guided Q&A with an experienced practitioner

What your team gains

- More disciplined drafting
- Clearer inventor interviews
- Better use of prior art
- Claims reviewed against the product and disclosure before filing

BRING AN EXAMPLE

Participants may bring a **non-confidential** example of their own for discussion.

Suneet B Sabale

Founder and CEO, Brainiac IP Solutions

A mechanical engineer, registered Indian Patent Agent and inventor with a granted patent in his own name. With 22 years in the patent field, he founded Brainiac IP Solutions in 2010. He works with product companies on patent drafting, FTO, patent analytics and IP strategy, and teaches as visiting faculty at Savitribai Phule Pune University and RGNIIPM.

What clients say about Brainiac

> *"Suneet and his team understood our requirements and prepared a strong provisional patent application within the required timeline."*
>
> Rajeev Sanyal, Pune

> *"The Brainiac team works professionally and responds promptly."*
>
> Jayesh Dubey, Pune

How the workshops run

FORMAT
Dedicated company session, or open dates. Ask us.

DURATION
One full day per program.

GROUP SIZE, VENUE, DATES, FEES
Tailored to your team. Ask us for a quote.

COMBINE
Programs are independent. Book one or both.

After the workshop: turn learning into protected IP

Ready to apply what your team learned? Brainiac can take the next step with you.

Patent Gap Analysis | IP and Patent Audit | Strategic IP Roadmap | Patent Filing and Prosecution
